

Track C: Cosmic Birefringence — Summary-Likelihood Inference

β posterior

f_{photon} posterior

(f_{photon}, C_0) degeneracy

TRACK C v2 SUMMARY

Data: Planck NPIPE + ACT DR6
Method: Gaussian summary likelihood

$\beta = 0.241^\circ \pm 0.061^\circ$
(3.9σ from zero)
 $\text{BF}(\beta \neq 0 \text{ vs } \beta = 0) = 175.8$
 $\ln \text{BF} = 5.2$

$f_{\text{photon}} (C_0=1) = 1.73 \pm 0.44$
 $f_{\text{photon}} (C_0=0.3) = 5.77$
 $f_{\text{photon}} (C_0=3) = 0.58$

$\varepsilon = (\alpha/M) \cdot M_{\text{Pl}} = 2.435\text{e-}03$
All f_{photon} values 0(1): natural
